

Accessory Strap instructions

CAUTION!!!:

Use these instructions only as a guide line.
NEVER attach **ANYTHING** in an area that may
impede the steering of your motorcycle!!

This is our tankbag accessory strap. Parts consist of the strap and one Slip-Not tube.

It's a long piece of hook and loop sewn in such a way it will secure your loose tankbag straps when not using the tankbag.

Your motorcycle may look a little different than ours
but this is the idea and concept of the application.

Slip one side of the strap through the back part
of the buckle. Right

Slip the other side of the strap through the back
part of the other buckle. Left

Fold the two top pieces of hook & loop over each
other snugly and that's it. Right
